

“Cell Disruption”
TECHNOLOGY ANALYSIS
IN THE COSMETIC
CATEGORY

“Cell Disrupted” *Spirulina* technology analysis

The uniqueness of “Cell Disrupted“ spirulina elements, is the technology, which allows fragmentation of the cell. “Cell Disrupted” technology enables to extract and use all components of spirulina not damaging those active materials which are in the cells. As the membrane of spirulina is fragmented neither mechanically nor chemically all the elements that are there are prepared to their further effective use.

Manufacturing “Cell Disrupted” products modern scientific approach is applied paying attention to special needs of the market. The ingredients are of the highest quality GMP and ISO standards are observed in all stages of manufacturing, GMO are not used.

To evaluate the effects of the “Cell Disrupted” spirulina cosmetics product was chosen Antera 3D facial skin test. Thanks to this study, the skin change parameters for a group of subjects using a daily use cosmetic product are presented with a detailed analysis of changes throughout the study.

Skin Analysis As It Should Be

The study was carried out with facial skin photography using Miravex Limited features Antera 3D. It is a powerful and versatile data handling and consultation tool for the analysis and measurement of:

- ✓ Wrinkles;
- ✓ Texture;
- ✓ Pigmentation;
- ✓ Redness.

This is real 3D imaging with high measurement precision, standardized lighting conditions, versatility of measurements and powerful data analysis.

This study aims to substantiate the effectiveness and benefits of cosmetic products from "Cell Disrupted" spirulina.

Automatic matching

Automatic Matching is a proprietary algorithm that precisely matches the selection on the Baseline image across all Follow-up images. Combined with the Real time registry of images, it makes image acquisition and analysis exact.

Evaluation the therapeutic efficacy of “Cell Disrupted” spirulina technology to improve skin conditions

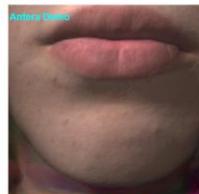

Objective: To determine the effect on the skin of the manufactured product - 1% spirulina extract made with “Cell Disrupted” technology. Product is designed for daily use. The following changes have been selected: wrinkles, texture (pores); pigmentation (melanin); redness (haemoglobin).

Methods: Study group is total of 15 persons age category from 16 age to 67 age. Investigation progress was two times interval: after first control photography passed two week and second after three weeks from second control photography. A total of sessions during intervals were conducted to each patient. Subjects used spirulina mist once daily in the evening.

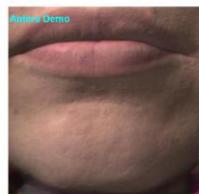

Results: The Antera scores for wrinkle after 3 sessions were decreased level $\pm 25\%$. The Antera scores for pores after 3 sessions were decreased level $\pm 32\%$. The Antera scores for melanin levels after 3 sessions were decreased level $\pm 2,5\%$, variation $\pm 7,1\%$. The Antera scores for haemoglobin levels after 3 sessions were decreased level $\pm 3,9 \%$; variation $\pm 11 \%$;

Conclusions: The study proved that the “Cell disrupted” spirulina mist product improves all skin parameters recorded in the study.

- Volume = 0.454 mm³

- Volume = 0.374 mm³

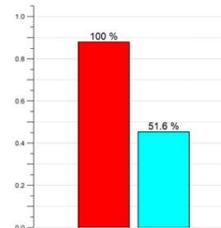

- Volume = 0.146 mm³

Volume of pores [mm³]
under 1.5 mm of lateral size

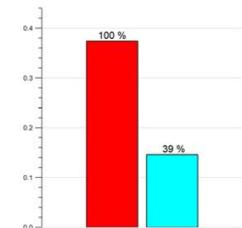

Circular selection:
area = 451.9 mm²
diameter = 24.0 mm

Volume of pores [mm³]
under 1.0 mm of lateral size

Circular selection:
area = 452.0 mm²
diameter = 24.0 mm

Volume of pores [mm³]
under 0.5 mm of lateral size

Circular selection:
area = 451.9 mm²
diameter = 24.0 mm
